

- 1) Build the following HTML form and submit it in the current PHP file you are working.

## Epoka Registration Form

First name

Last name

Birthday  
 

Email

Password

Study program  
 ▼

- 2) When submitted, make sure the first name and last name contain only letters.  
Make sure the student is at least 18 years old to register it.  
Email should start with the first letter of the first name, followed by the last name, followed by the last 2 digits of the year he/she was born, followed by @epoka.edu.al. Ex: If the students name is Foo Bar (born in 2001) his email should be fbar01@epoka.edu.al.  
Password should be at least 6 characters long, contain at least one uppercase letter, at least one lowercase letter, at least 2 digits and at least one special character.  
Study program is a select list where values are saved into a text file. Read the text file and then display all the study programs.
- 3) If all inputs pass their respective validations, save this student into a file and *reset the form to default values*
- 4) If any validation fails, display the message to the end user of why it failed (what validation failed) but do not reset the form, keep everything the user typed in there.
- 5) Every student saved in the file, should also be displayed in the HTML page
